Sales Intelligence Report

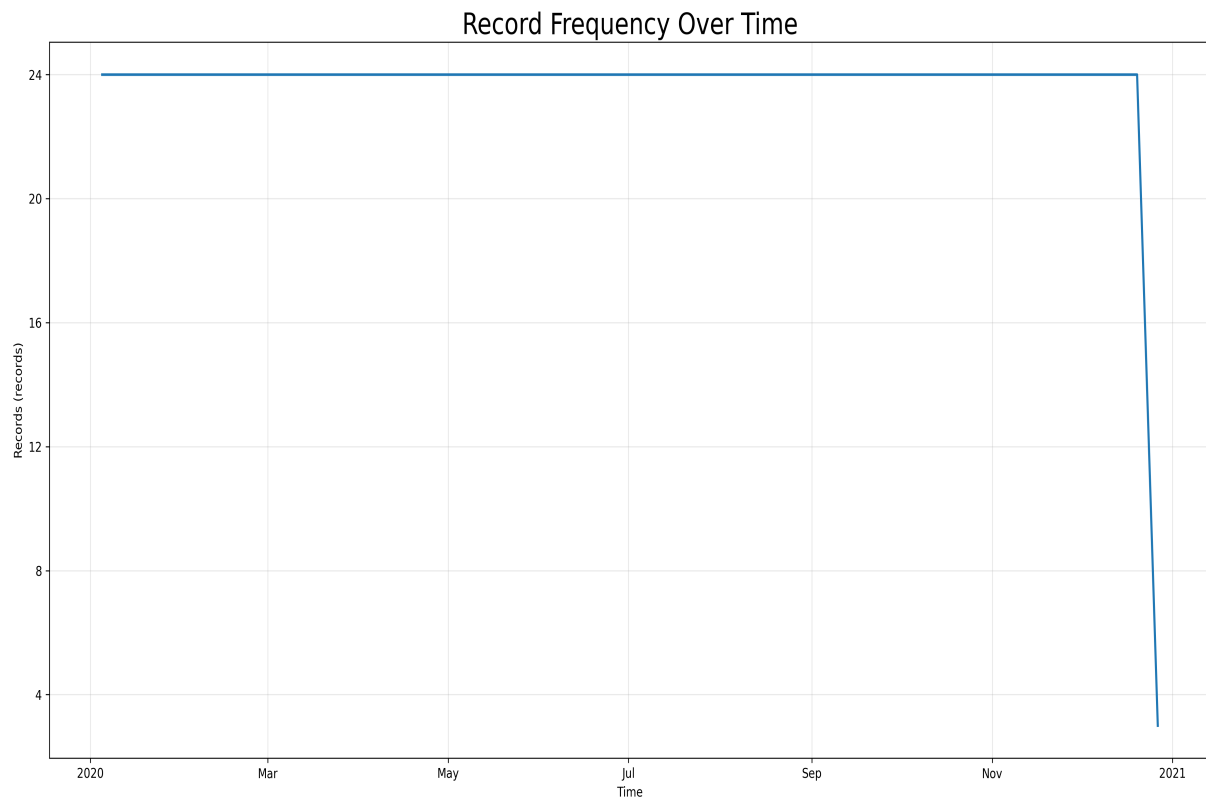

Total Records Analysed: 8523

Observation Window: 2020-01-01 00:00:00 to 2020-12-21 02:00:00

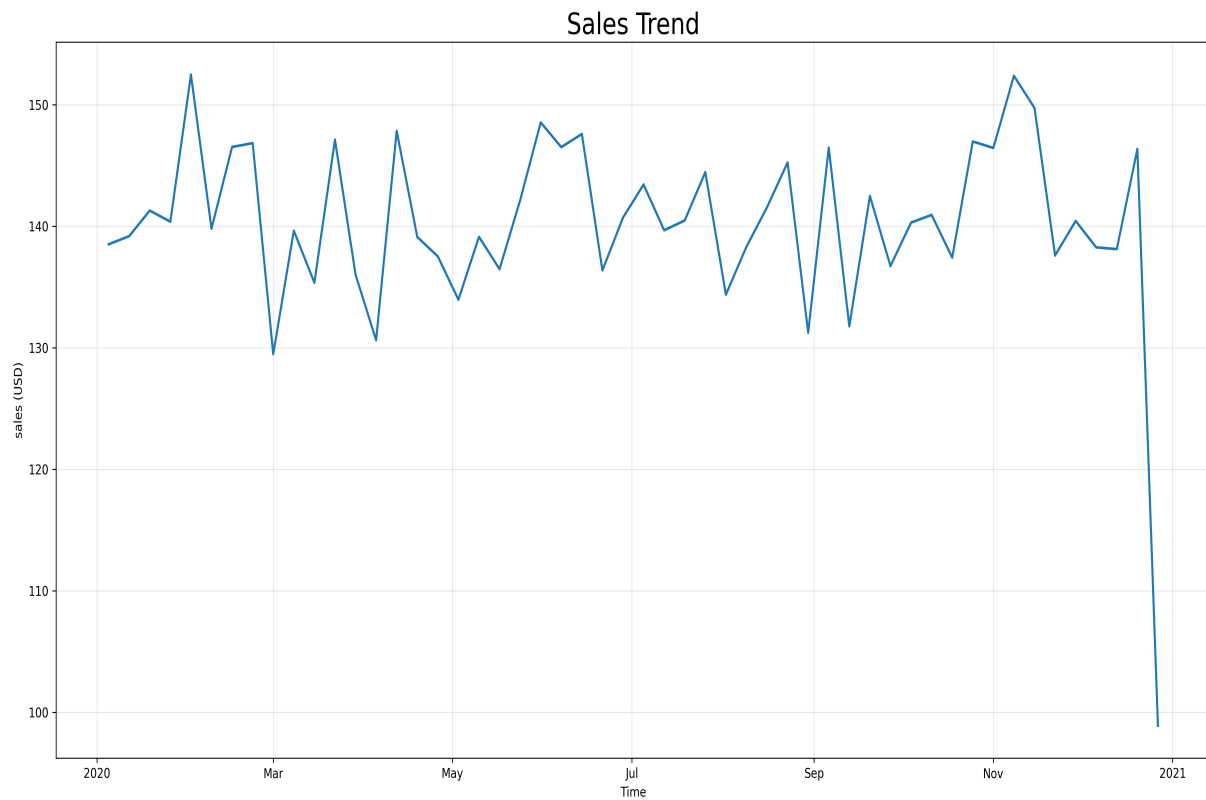

Average Sales: 140.99

Data Frequency Interval: 1.0 hours

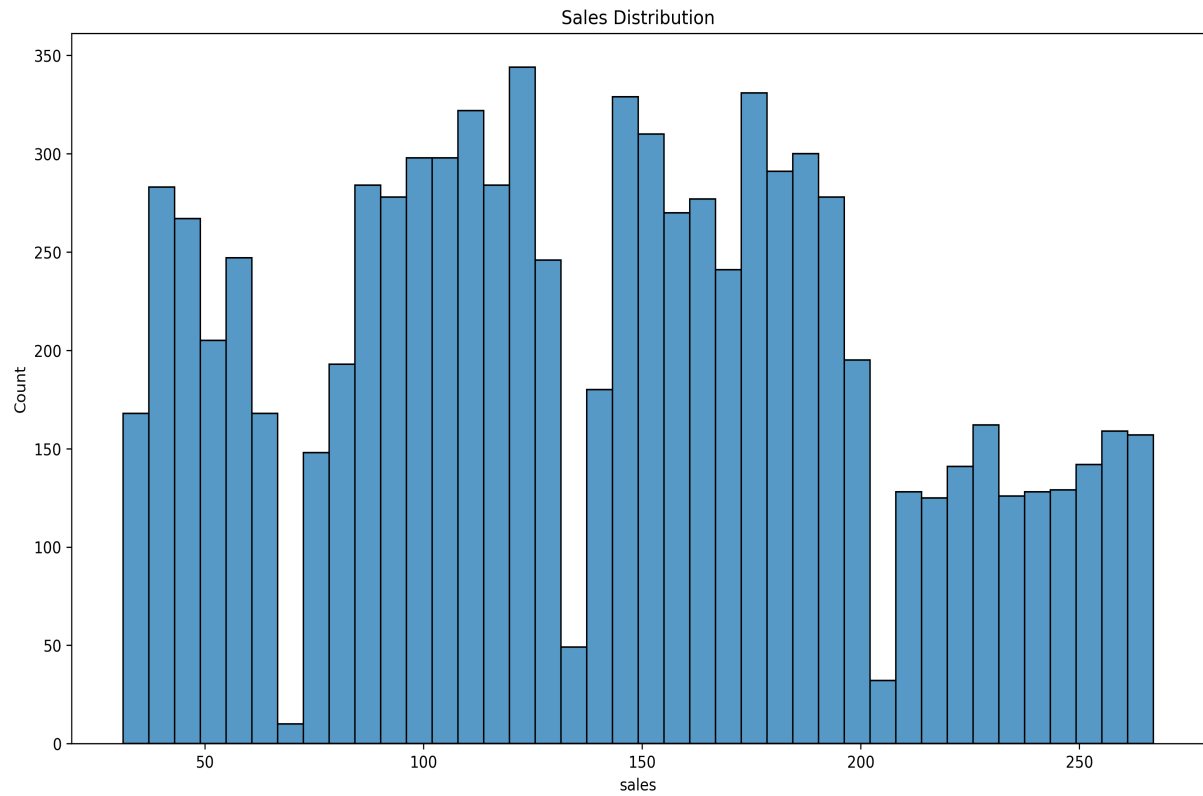

Dataset contained 8523 records during the observation window. Average sales value was 140.99 with maximum reaching 266.89. Operational patterns indicate measurable variability in sales performance. Clustering highlights groups of products with similar characteristics. Outlet and product category comparisons reveal structural differences in revenue generation.

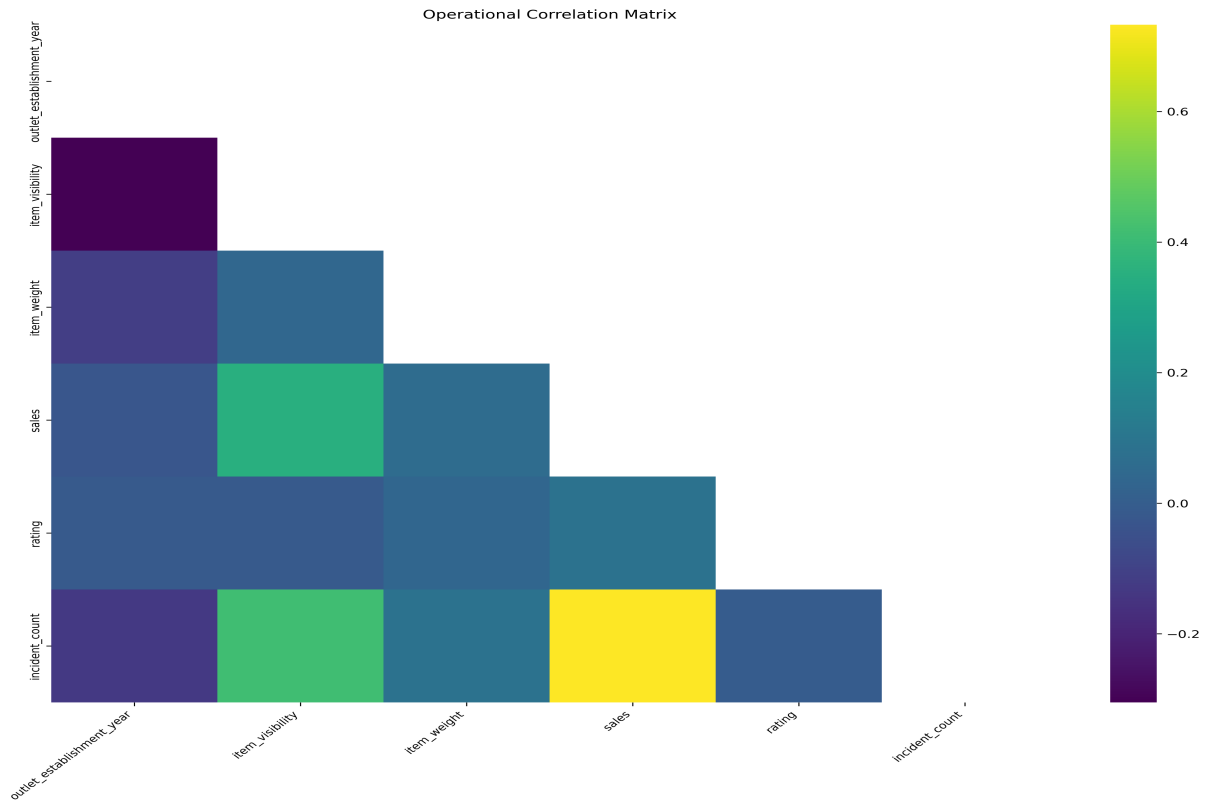

Record frequency averaged 23.6 records. Maximum reached 24.0 records while minimum was 3.0 records. Standard deviation 2.91 reflects operational variability.

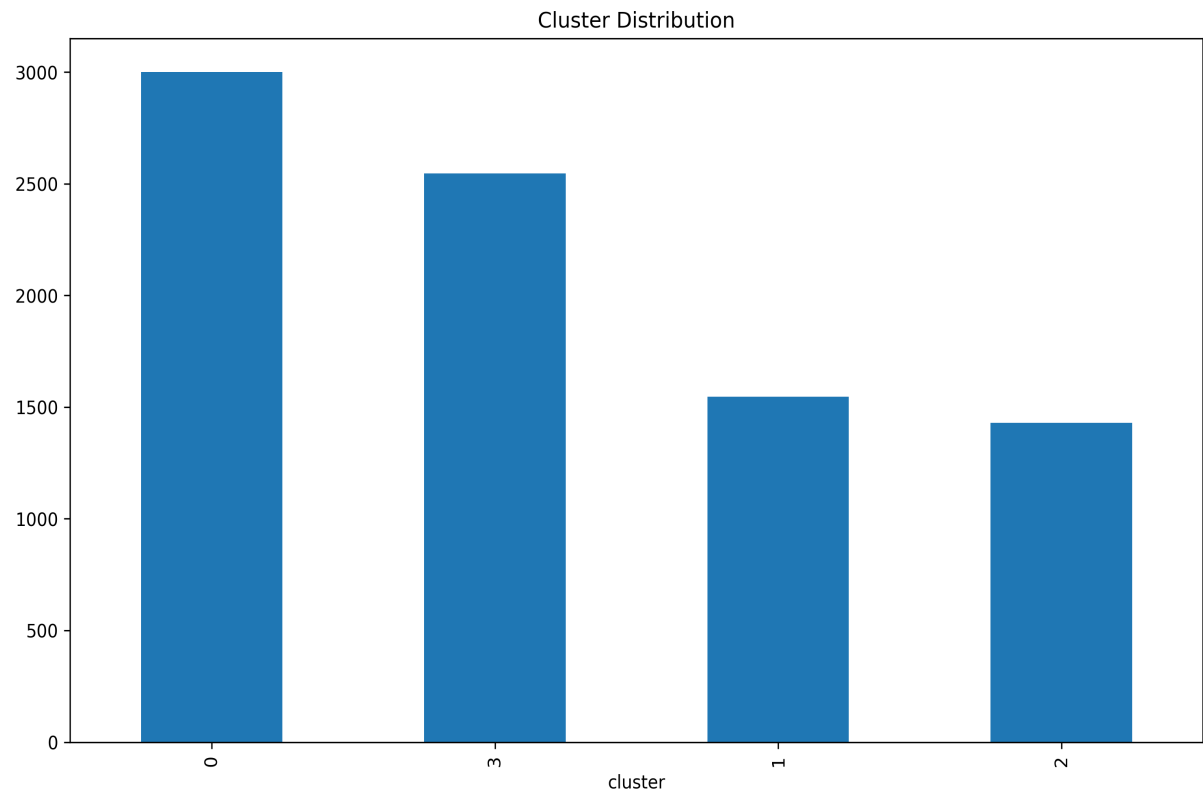

sales averaged 140.18 USD. Maximum reached 152.48 USD while minimum was 98.92 USD. Standard deviation 7.96 reflects operational variability.

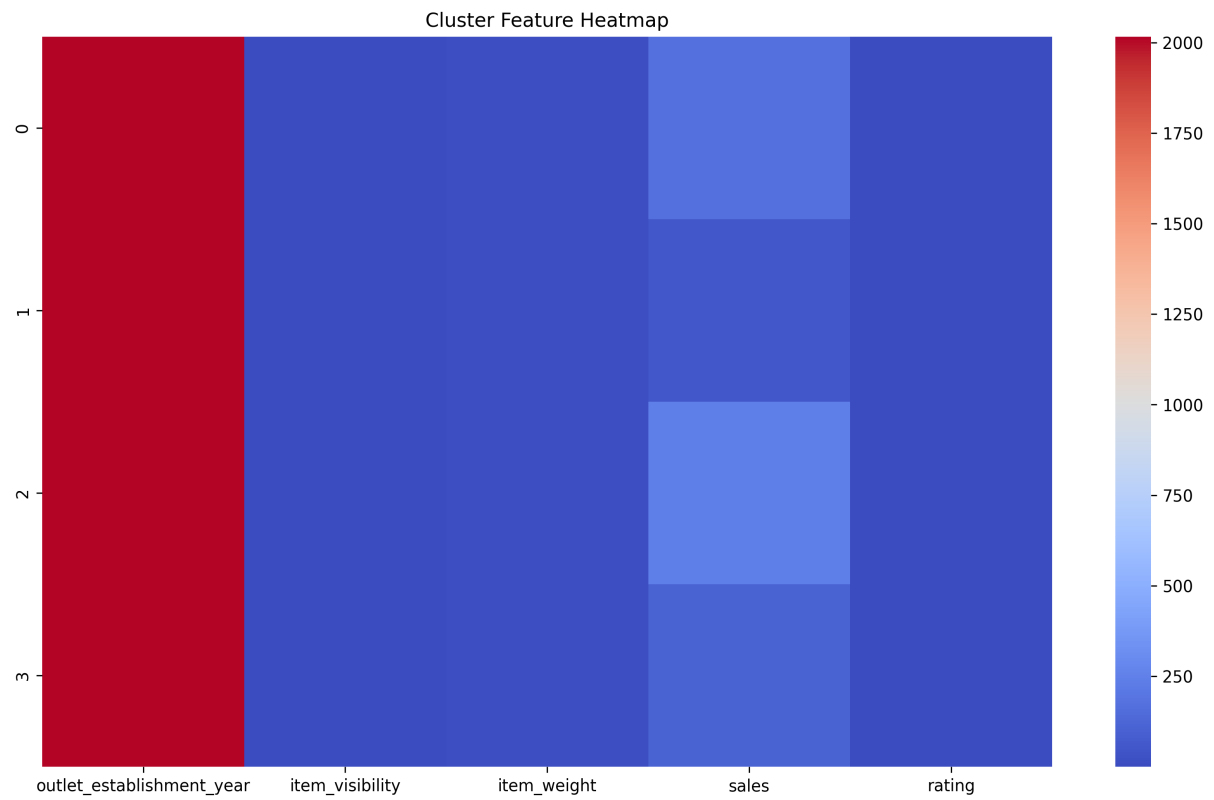

Distribution of sales values showing spread and concentration of revenue performance.

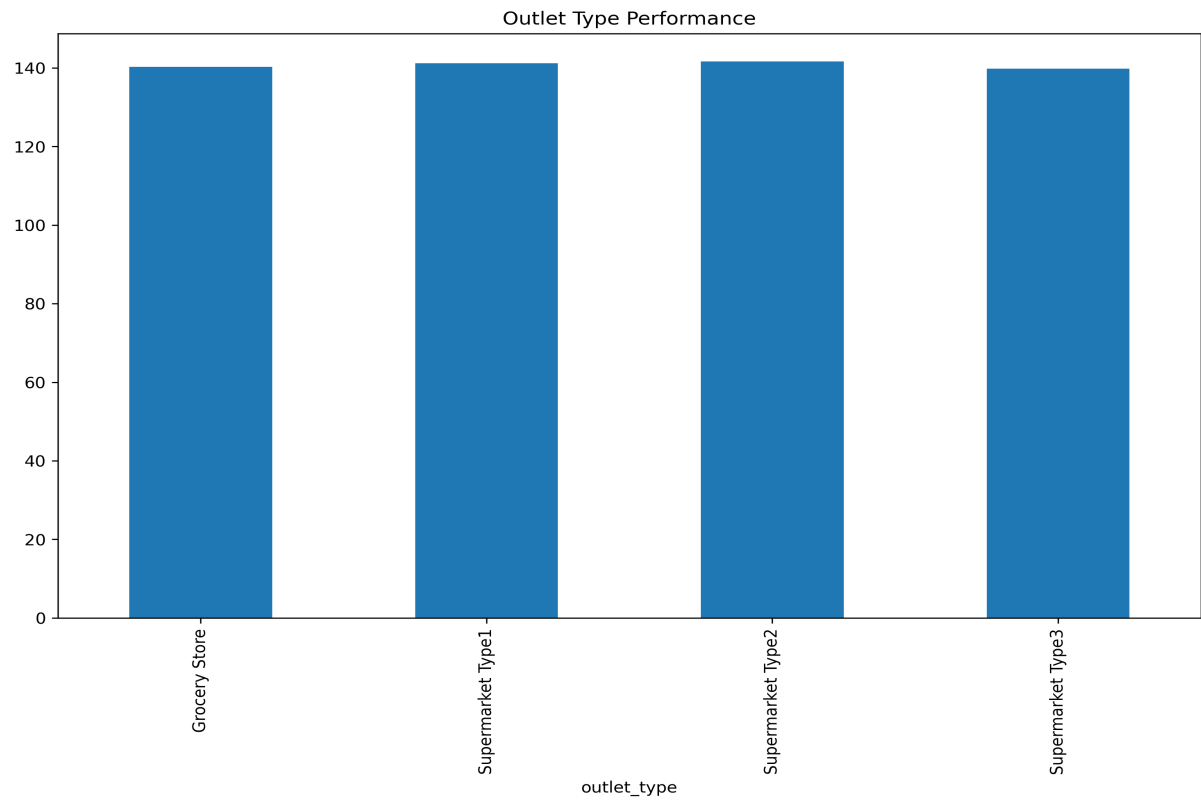

Correlation matrix showing statistical relationships between operational indicators.

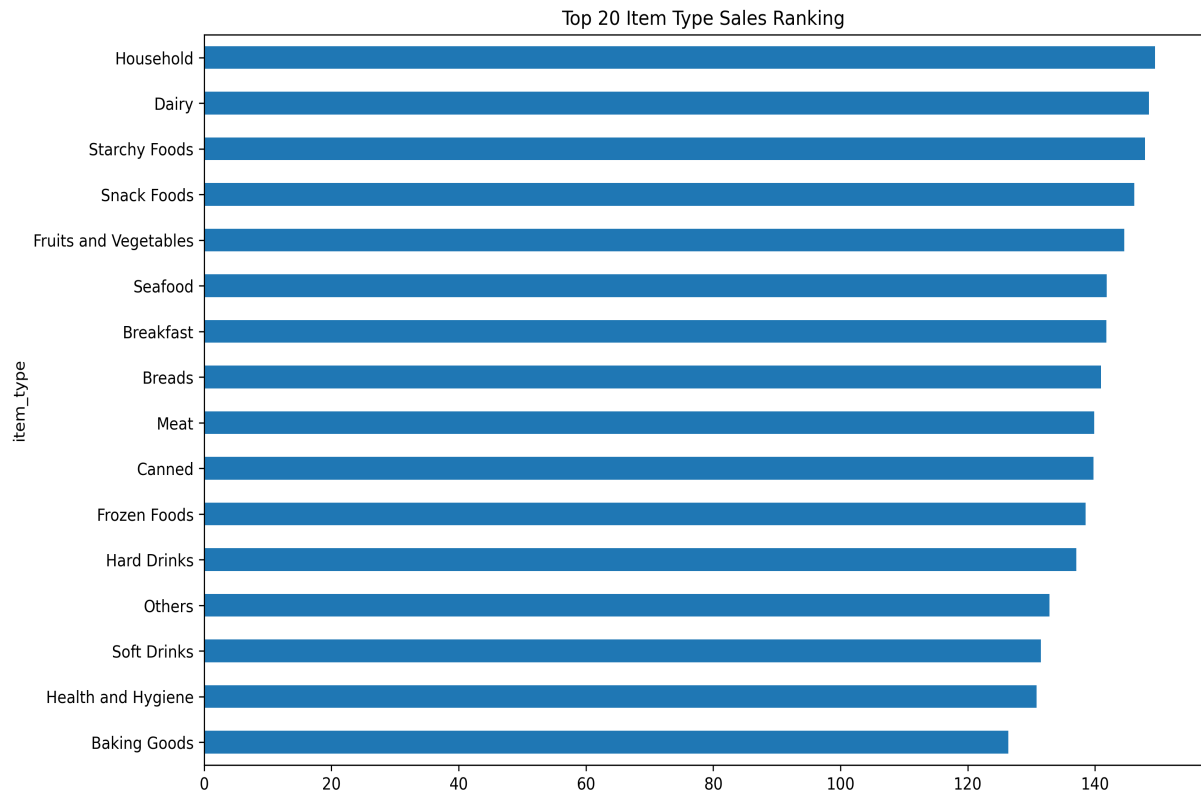

Clustering groups records with similar operational characteristics.

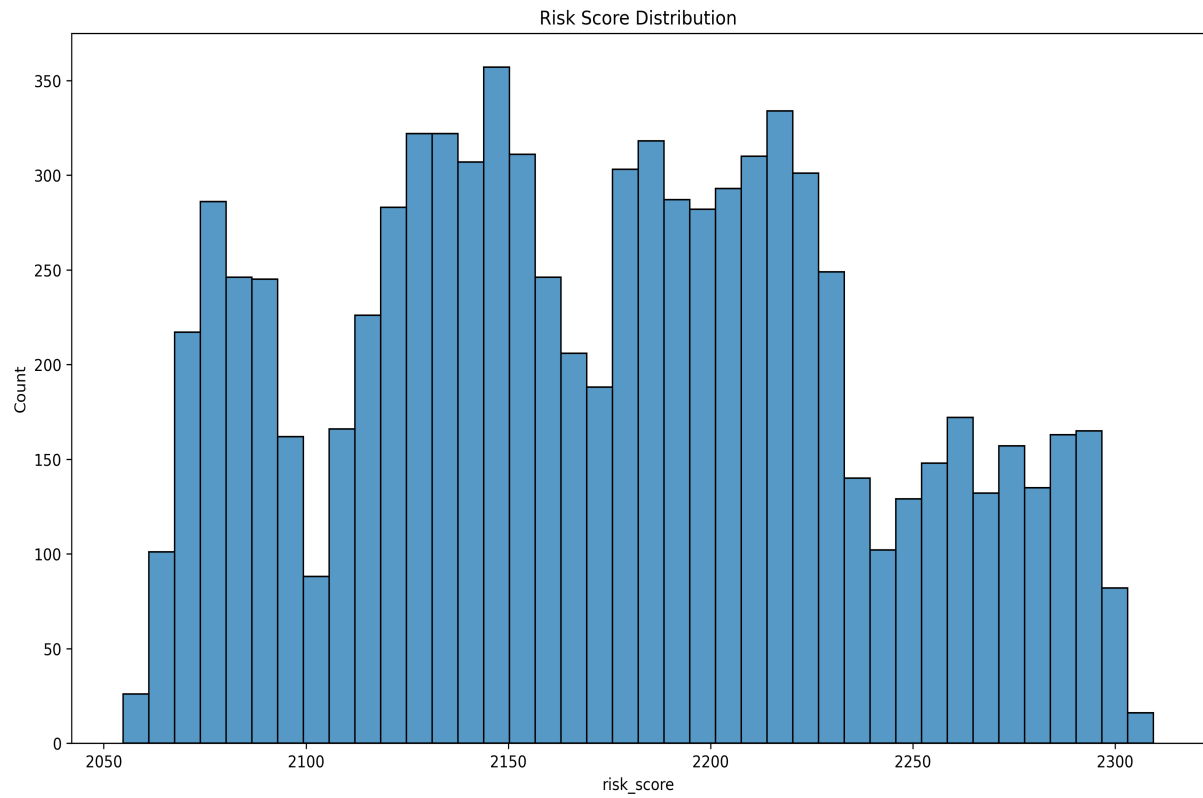

Heatmap illustrating feature influence across clusters.

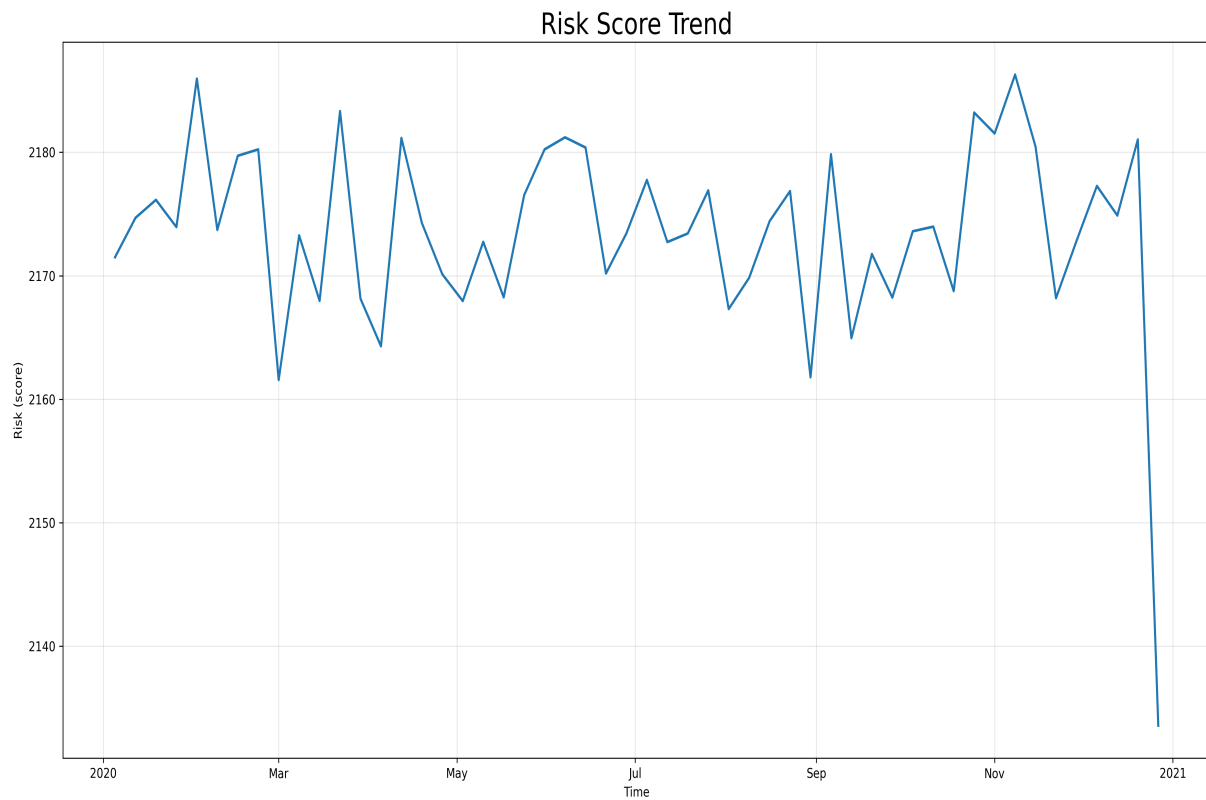

Comparison of outlet types based on average sales.

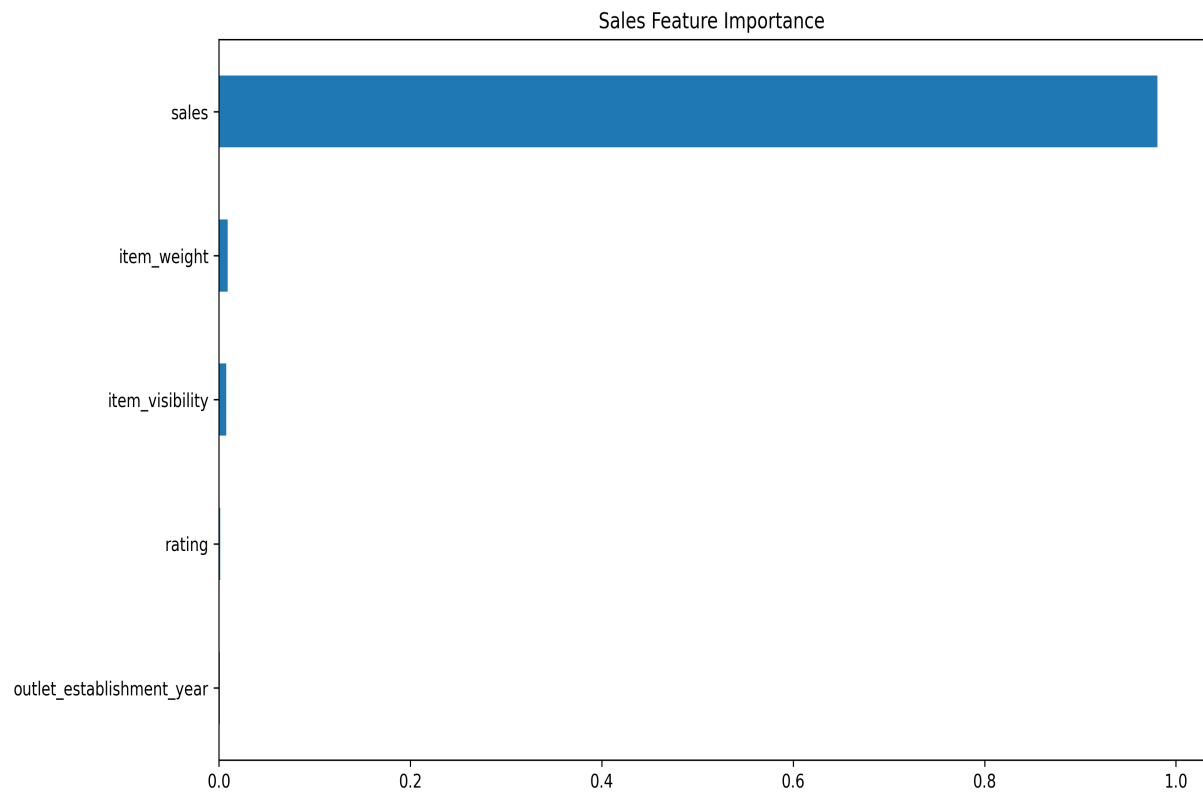

Top twenty item categories ranked by average sales.

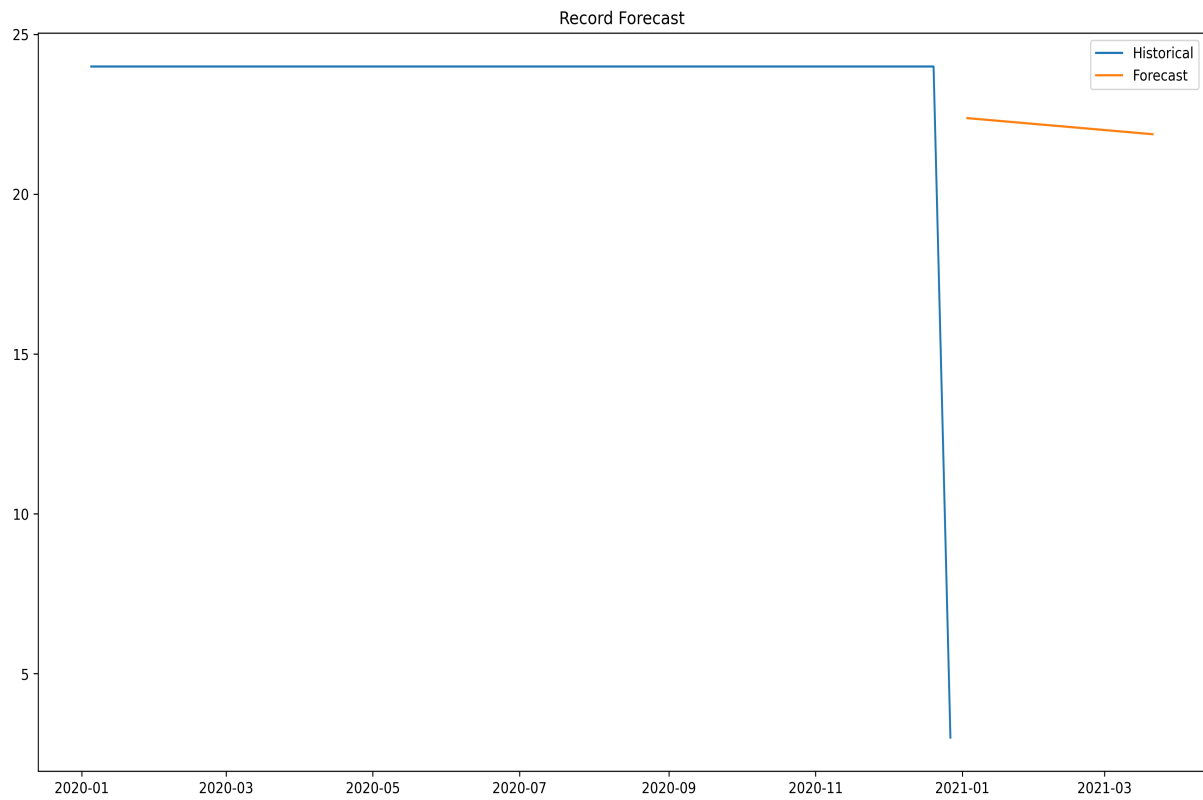

Composite operational score distribution.

Operational risk averaged 2173.5 score. Maximum reached 2186.29 score while minimum was 2133.56 score. Standard deviation 8.17 reflects operational variability.

Feature importance derived from sales prediction model.

Time series forecast predicting future record frequency.
